

UNITWIN/UNESCO Chairs Programme Progress report 2010-2012

«If this has not yet been done, please forward your progress report before
31 May 2012» to the Director, Division of Higher Education.

Period of activity: 2011-2012

Title: UNESCO CHAIR TELEMEDICINE

Report established by: Prof.Dr.O.Ferrer-Roca,

Function / Title: responsible UNESCO Chair Telemedicine 1999-2012

Full Professor in Pathology. Responsible of the Telemedicine Training at the University of La Laguna. Canary Islands. Spain

To be sent by electronic mail to: unitwin@unesco.org

Or to UNESCO, Division of Higher Education

7, place Fontenoy – 75352 Paris 07 SP

Fax: 33 1 45 68 56 26/27/28

Summary

Web Site	http://www.teide.net/catai	http://www.teide.net/catai

II. Available resources

1.1. Human resources

1. For the administration of the UNESCO Chair or Network
Partial time support Secretary Isis Klein
Partial time support Secretary Jessica González
2. For the teaching/training/research activities
Please specify number of full professors, researchers, visiting professors, lecturers, others
Prof. Dr. O. Ferrer-Roca
Engineer, Fellowship Daniel González Mendez; Jesús Montañez Díaz
Secretary Xiomara Santos Palacios(until June, 2011);Rebeca Plasencia García
3. For the information and documentation activities:
Prof. Dr. O.Ferrer-Roca
4. For other activities: The international courses brought to teaching and training a total of 30 professors coming from European, African and Ibero-American countries (Greece, Germany, Brazil, Spain, Uganda, Norway, Italy, Portugal, Venezuela, Argentina, Hungary).

2.2. Material resources

1. For the administrative work: Computers fax machines, xerocopy machines, printer, and storage systems.
2. For the teaching/training/research activities: Videoconference, workstations, ultrasounds, video-edition, projector, Book edition, CD-edition, Proceedings editions, e-learning, Digital Fingerprint control systems, Breeze server, iPhone medical applications.
3. For the information and documentation activities: Web site, Posters, brochures, Proceedings, Book editions, CD-edition
4. For other activities (Please specify): Videoconferencing, 3D-virtual reality, skylight distant control, iphone applications (blood pressure monitor, ECG, EEG).

III. Activities

Please, provide information on items 1 to 7 for each activity, when available, and specify:

- Target groups, in accordance with Annex 1
- Geographical coverage, in accordance with Annex 2
- Funding sources, in accordance with Annex 3.

1. Education/Training/Research

1.1. Title and expected results for each course, workshop,...

See joined memorandum and programs of the Winter Course of the CATAI (Annex 5- Form 3)

- Duration: 1weeks.
- Target groups: doctors, nurses, health-care providers, NGO's

5.1.1. Partnership (please specify the name of the Institution, city, country):

Universities Trier-DE, Postdamm-DE, Humboldt Univ. Berlin-DE, Makerere-Uganda, Simon Bolivar-Caracas-Venezuela, Athens Univ. of Economics and Business-GR, Istanbul-Turkey, El Cairo- Egypt, EntreRios-Argentina, Barcelo Univ Buenos Aires, Argentina, Pontificia Universidade Catolica do Rio Grande do Sul (PUCRS) Porto Alegre-Brazil, Porto-Portugal, Univ Oslo, Oslo-Norway, Univ Munich-Munich- Germany, Universidad Politecnica Barcelona (UPB)-Spain. Hosp. Clinic Barcelona-Spain, Univ. Di Roma Sapienza-Italy, Univ Budapest-Hungary, Univ Udine, Italy. Univ. Cheikh Anta Diop, Dakar, Senegal, Univ d'Abomey Calavi (Cotonou), Rép. Du Benin y Univ Nacional de Guinea Ecuatorial (UNGE), Guinea Ecuatorial.

- Geographical coverage for partners and participants: Europe-Africa-South & North America.
- Funding sources: CATAI founding. Telefónica SL.
- Outputs: Please specify number of doctoral students: 150-200 students per year. For the publications, complete form of Annex 4, and Annex 5 for the multimedia material.

2. Conferences/Congresses/Meetings

2.1. Title and expected results for each conference, meeting....:

They are always in Telemedicine. Expected increase of knowledge and training of how to handle medicine at distance for people and areas underserved or with health care constrains availability.

Dates and place: *III International symposium of biomedical informatics in EU HealthInfo & Biostec. Rome Italy 25-29th January 2011. VIII Reunión de Cooperación de Telemedicina com la Universidad Politécnica de Alcoy, Valencia, España 13-16 mayo 2011. Ia Reunión de Cooperación científica internacional en el campo de aplicaciones de análisis de imagen en Telemedicina y Telesalud, Munih, Alemania, 30 junio- 12 julio de 2011. MHealth Summit 2011, en Washington, D.C, US, 3 diciembre-12 diciembre de 2011 y XIX CATAI Winter Course 4G Mobile Phones in TELEMEDICINE del 28 de marzo al 03 abril, 2011 y XX CATAI Winter Course Health Cloud, iCloud & Crowdsourcing in Telemedicine, del 12-18 marzo, 2012 and we have planned attend to the following congresses:*

In June, 2012 we will attend the UPC meeting in order to deal with the CBIR project (Content based image retrieval) and also at the end of August we will attend 14th International Congress of Histochemistry and Cytochemistry in Kyoto, Japan.

- Partnership (please specify: Name of the Institution, City, Country): see joined programs plus Mulago Hospital-Uganda; Roche Research Center, Univ Perm-Russia, Casablanca-Marocco, Pontificia Universidade Catolica do Rio Grande do

Sul (PUCRS) Porto-Alegre-Brazil. Technical University Munich (Germany). Israel Institute of Technology (Haifa-Israel).

- Participants (number): 100 up to 1000 depending of the type of meeting
- Geographical coverage for participants and partners: Europe, Africa, South-America, Asia & Australia.
- Funding sources: CATAI funding. Telefonica SL.
- Outputs: Please complete Annex 1 for the publications and Annex 2 for the multimedia material.
- Actually “**Telemedicine Master**” at distance, with the Universities of Makere-Uganda, Beijing-China, New Delhi-India, Istambul-Turkey, El Cairo-Egypt, Queensland- Australia, Casablanca- Marocco; Albenia.
- First stage of the Network Project of Virtual Laboratories and Teleoperated of Colombia from the e-LABColombia and the University Network of e-Health (RueS)

3. Missions / Travels abroad

Destination: University La Laguna-UNESCO Chair Telemedicine.

From : Entre Ríos-Argentina, Makerere-Uganda and Caracas-Venezuela

Purpose: Students training in telemedicine

Duration: from 1 to 2 month

Funding source: University of La Laguna/Telefónica SL / Catai fundings/

Outputs: 1- Training of students to provide telemedicine in underserved areas.

- 2- A/026283/08 - Desarrollo Rural: Web Semántica para la Gestión, planificación t coordinación descentralizada en Telemedicina.

http://www.uib.es/catedra_iberoamericana/PCI09/laguna.pdf

4. Visiting professors / Fellowships

Number: (22)

Duration: 1-2 month

University of origin: Potsdam-Germany (2), U.-Caracas-Venezuela (2), , Clinical university of the Charité-Berlin (2), U. Makerere - Uganda (1), , Univ Oslo, Oslo, Norway (2), Univ Athens (3), Univ Munich- Germany (2), Univ Mainz, Germany (1) Univ Budapest, Hungria (2), U. Rio Grande do Sur-Brazil (1); U. Politecnica Barcelona (2).Univ Madrid, Madrid, Spain (2),

Funding sources: University of La Laguna, CATAI fundings, Telefonica SL.

5. Information and documentation activities

- 5.1. **CATAI 2102** “Health, i-cloud and Crowdsourcing in Telemedicine” CATAI editions 2011 Tenerife. Canary Islands. Spain ISBN: 978-84-615-6145-2
- 5.2. **CATAI 2011** “I-Phone & 4G mobile phone in Telemedicine” Ed: Prof.Dr.O.Ferrer-Roca. CATAI Ed 2010. Tenerife. ISBN. 978-84-614-5897-1
- 5.3. **CATAI 2010** “IoT Internet of Things for Medical Devices. Health 2.0 to Health 3.0” Ed: Prof.Dr.O.Ferrer-Roca. CATAI Ed 2009. Tenerife. ISBN. 978-84-612-8620-1
- 5.4. **CATAI 2009** “Superresolution and Optical Biopsy” Ed: Prof.Dr.O.Ferrer-Roca. CATAI Ed 2008. Tenerife. ISBN. 978-84-612-8620-1
- 5.5. European Master of Telemedicine and Bioengineering applied to Telemedicine, **Volume V**. CATAI Editions 08. ISBN 978-84-612-8290-6
- 5.6. European Master of Telemedicine and Bioengineering applied to Telemedicine, **Volume VI**. CATAI Editions 09. ISBN 978-84-613-7245-4.
- 5.7. European Master of Telemedicine and Bioengineering applied to Telemedicine, **Volume VII**. CATAI Editions 10. ISBN 978-84-614-5996-4.

6. Others

6.1. Written agreements with Universities

- 6.1.1. Agreements with the University of Barcelona in order to provide distant teaching and projects related to the image query standardization
- 6.1.2. Agreements with the Pontifícia Universidade Católica do Rio Grande do Sul (PUCRS), Porto-Alegre, Brazil for training in telemedicine.
http://www.teide.net/catai/Catedra_Uunesco/catedra_unesco_esp.htm.
- 6.1.3. Agreements of the students interchange in the field of Telemedicine and for third cycle students with the Universities of Postdamm-DE (6 Students), Charite-Berlin-DE (6 Students) and Univ. Udine-IT (6-students) as Erasmus students, plus 1 or 2 professors from each University.
- 6.1.4. Agreements with The Autonomy University of the Caribe- Colombia to develop the Telemedicine network.

6.2. Training Books donations

- 6.2.1. Donations of the vol. V of the European Master of Telemedicine and Bioengineering applied to Telemedicine. to the Universities of Entre-Rios (5), Makerere (6), Caracas (5), Greece (5), Univ. Rio Grande do Sur.Brazil (6).
- 6.2.2. Donations of the vol. VI of the European Master of Telemedicine and Bioengineering applied to Telemedicine. to the Universities of Entre-Rios (5), Makerere (6), Caracas (5), Greece (5), Univ. Rio Grande do Sur.Brazil (6), Senegal (3), Rép. Du Benin (6) y Guinea Ecuatorial (4).
- 6.2.3. Donations of the vol. VII of the European Master of Telemedicine and Bioengineering applied to Telemedicine. to the Universities of Entre-Rios (5), Makerere (6), Greece (5), Univ. Rio Grande do Sur.Brazil (6).

6.3. International projects

- 6.3.1. Joined projects of the Ministry of Foreign Affairs and International Cooperation with Venezuela. BOE nº6 1495-1592, 2009. AECI- A16183/08 - *Desarrollo Rural: Web Semántica para la Gestión planificación y coordinación descentralizada en Telemedicina*
- 6.3.2. Joined cooperative projects with the Ministry of Education and Research and de Ministry of Brazil in the Bazilian-Spanish interuniversity cooperation programm. PHB 2008-0021-TA. *Role of Superresolution in Telemedicine*
- 6.3.3. CAP2009-1^a call with the title: *Biopsia Óptica por Endoscopia Confocal. Técnica no invasiva para zonas rurales indígenas del Brasil.*
- 6.3.4. Concesión de Becas. Según el BOC Nro. 023 Jueves de 4 de Febrero de 2010 – 602. de África Noroccidental y Universidades de Canarias y el Gobierno Autónomo de Canarias. Université Cheikh Anta Diop de Dakar, País: Senegal, Université d'Abomey Calavi (Cotonou), País: Rép. Du Benin y Universidad Nacional de Guinea Ecuatorial (UNGE), País: Guinea Ecuatorial.
- 6.3.5. Proyectos de cooperación entre Universidad de La Laguna e Israel.

IV. Impact

1. In Uganda, their initiatives with the use of VHF in walky-talkies to support midwives, has decreased the mortality of new-born babies by 30%.
<http://www.iicd.org/articles/iicdnews.2006-05-08.0697050392>
2. With the Simon Bolivar University in Caracas Venezuela, we will bring the development of rural areas accessing distant diagnosis of vaginal cytology.
3. With Pontifícia Universidade Católica do Rio Grande do Sul (PUCRS) PortoAlegre in Brazil has been started obtaining funding for a joint seminar of training and extending the telepathology to telepathology and teledermatology mission to the Amazon (City of Jiparana) and in Amazon area (Rondonia State) this summer.
4. With Entre-Ríos cooperation have extended the telemedicine into the Peru selvage areas in the Napo river
5. Scholarships of the GD of the relations with Africa from the Canarian Government.

One of the main obstacles in the wide use of Telemedicine is the lack of specific training and qualifications in the health care environment (doctors, nurses, paramedics, managers, NGO's) as well as related areas from which they require support (computer science, telecommunications).

1. Relation Article Citation in international collaborations

2. Geographic distribution of web visitors 1year:

V. Forthcoming activities

1. XXI WINTER COURSE OF THE CATAI –March 2013 – Tenerife – Spain
2. STUDENTS EXCHANGE TO TENERIFE
3. STUDENTS TRAINING IN TENERIFE
4. UGANDA DOCTORS TRAINING IN EUROPE
5. SCHOLARSHIPS FOR IBEROAMERICAN BIOENGINEERS
6. EU to IBEROAMERICA INTERCHANGE FOR SUPPORT.
7. TELEMEDICINE MASTER FOR DEVELOPING COUNTRIES
8. MASTER OF TELEMEDICINE AT DISTANCE.
9. TELEPATHOLOGY WITH “SSVS” IN DEVELOPPING COUNTRIES.
10. NON-INVASIVE BIOPSY IN DEVELOPPING COUNTRIES

VI. Development prospects

The activities of the Chair started on 1999 and have expanded during the period 2009-2012 to the following countries:

1. – Brazil and the Norwest Amazonia Area.
2. – Cabo Verde islands
3. – Israel
4. – Columbia- Barranquilla
5. – Senegal
6. -- Republic. Du Benin
7. -- Guinea Ecuatorial

Annex 1

Target groups

Undergraduate students	YES
Graduate students	YES
Postgraduate students	YES
Academics	YES
Public administrators	YES
Employees from industry, or other private organizations	YES: NGO's
Teachers from primary education	NO
Teachers from secondary education	NO
Teachers from technical and vocational education	YES
Teachers from adult education	YES
Others groups (<i>Please specify</i>)	YES: VOLUNTIERS

Annex 2

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

Sanidad en la nube, i-Cloud y Consulta masiva trata los aspectos relacionados con “ la nube sanitaria”, el papel que la telefonía móvil desempeña en este tipo de actividades, así como la repercusión que tiene el denominado “ Crowdsourcing” en el contexto sanitario que permite a los médicos consultar con los mayores expertos en las distintas áreas sanitarias.

La tecnología debe asegurar un sistema de provisión de servicios en sanidad, viable económicamente, descentralizado y ubicuo todo ello a bajo coste por ello los teléfonos inteligentes y los servicios en la Nube van a ser determinantes en esta evolución. El almacenamiento masivo de datos y su accesibilidad y control remoto con virtualización disminuirán costes y personal. se tratan en el presente libro, que se basara principalmente en como pueden los profesionales médicos valerse de las nuevas tecnologías y la comunicación (TICS), para hacer mas eficiente las asistencia a distancia.

El principal objetivo de la enseñanza de la Telemedicina *es capacitar al estudiante en los aspectos de control de calidad de la medicina a distancia.*

El resultado es conseguir médicos documentados en salud-electrónica (competencia general) y conocedores de las subespecialidades informáticas en medicina (competencia específica) -patología-informática, bioingeniería telemedicina, cirugía robótica, onco-grid, minería de datos.

Para ello los estudiantes han de formarse en los aspectos de interoperabilidad, estandarización, accesibilidad, conectividad y protección de datos en gestión de documentos, telemetría y servicios ofrecidos a distancia.

1.2. Title: i-Phone & 4G mobile phone in Telemedicine.

Publisher(s): CATAI 2010 Ed. Ferrer-Roca o. Ed.ISBN 978-84-614-5997-1

Teaching/learning material

Language(s): >Bilingual (English/Spanish)

Main keywords (4 or 5):

SHORT ABSTRACT

(*Brief description of the content in English, French or Spanish*)

Móviles 4G en Telemedicina, trata de los aspectos tecnológicamente mas avanzados sobre la gestión de los dispositivos a distancia a través de Telefonía móvil. Particularmente:

1.- El uso de los móviles de ultima generación para la medicina y las aplicacionesH2H (health2health) y las Smart-GRID o el acceso universal en la Nube, además de los aspectos tecnicos del Packet Backhaul Technology, o las estrategias packet-core.

2.- El control de calidad de las aplicaciones de Telemedicina

3.-El informe: "Telecommunications, IT and Heathcare: Wireless Networks, Digital Healthcare and the Transformation of US Healthcare, 2006-2011" en el que se especifica que en USA la industria de TIC relacionadas con la salud se incrementara en un 8.4% en 5 años cubriendo desde \$7.5 billones en 2008 a \$11.3 billones en 2013. El gasto sanitario pasara de ser un 6% del PIB a un 16% a 18%. La industria sanitaria se ve forzada a operar de forma mas eficiente, y un elemento central será la creación de redes eficientes capaces de compartir no solo datos sino imágenes de calidad para el diagnostico remoto que se lleva a cabo con personal medico altamente cualificado. Un coste enorme se pierde en el sistema en la interface medico-paciente – tiempo de desplazamientos, buscar plazas a los enfermos, buscar la atención que requieren, administrar la atención etc... - Por ello el control remoto es algo esencial y por eso contamos con expertos internacionales, especialmente seleccionados por sus aspectos innovadores en su clínica diaria o en sus investigaciones y por su apuesta por la estandarización y calidad de la asistencia

1.3. Title: i-Phone in Telemedicine. e-Health 4.0

Publisher(s): CATAI 2010 Ed. Ferrer-Roca o. Ed.ISBN 978-84-614-5997-1

canary Islands CATAI- Tenerife-Spain

Year: 2011

Number of pages: 22-30

Type of document/material:

* Book X

* Periodical

* Others (*specify, please*)

Teaching/learning material

Language(s): English

Main keywords (4 or 5): iPhone, iPad, iPod, Telemedicine, Vital signs, Image diagnosis, hand-held devices.

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

The quick introduction of iPhone, iPad, iPod products in medical delivery, together with the approval of several diagnostic-prognostic-distant care –management applications by the FDA, assure a non-stop deployment in modern medicine of mobile applications starting the i2i era. The present paper not only list approved application but already developed applications together with future deployments.

1.4. Title: Ultrasound in Telestroke- i-Phone services.

Publisher(s): CATAI 2010 Ed. Ferrer-Roca o. Ed.ISBN 978-84-614-5997-1
canary Islands CATAI- Tenerife-Spain

Year: 2011

Number of pages: 17-21

Type of document/material:

* Book X

* Periodical

* Others (*specify, please*)

Teaching/learning material

Language(s): English

Main keywords (4 or 5 Teleictus, Ultrasound, iPhone, iMedicine, 3DUS, Telemedicine.

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

The project presented is dealing with the use of the ultrasonography in the field of neurology with portable solutions in two main applications: diagnosis of carotid artery stenosis and diagnosis and treatment of the ictus. The project aims to use the telemedicine and compares the results with the regular protocol at the hospital to see if the times and diagnosis can be reduced.

1.5. Title: Placental Virtual Biopsy

Publisher(s): CATAI 2010 Ed. Ferrer-Roca o. Ed.ISBN 978-84-614-5997-1
canary Islands CATAI- Tenerife-Spain

Year: 2011

Number of pages: 31-37

Type of document/material:

* Book X

* Periodical

* Others (*specify, please*)

Teaching/learning material

Language(s): English

Main keywords (4 or 5) Virtual Biopsy, Placenta, 3D-US, Hand-held US..

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

The present study describes the technique of PVB (placental virtual biopsy) and its future improvements, establishing the requirements for reproducible measurements and considering their extension to iPhone or hand-held US devices. From the data collected FI (Flow Index) was related with foetal circulation, while VI (Vascularization Index) was supposed to be maternal-related. The 3D-US Power Doppler had been diagnostic to detect GD with an increase in FI>45 and number of vessels (>30%). Whether VI changes could predict FI or fetal changes is a matter of discussion...

1.6. Title: Optical biopsy data base content retrieval with a smartphone

Publisher(s): CATAI 2010 Ed. Ferrer-Roca o. Ed.ISBN 978-84-614-5997-1
canary Islands CATAI- Tenerife-Spain

Year: 2011

Number of pages: 44-48

Type of document/material:

- * Book X
- * Periodical
- * Others (*specify, please*)

Teaching/learning material

Language(s): English

Main keywords (4 or 5) Medical image search, CBIR, multimedia, images, metadata, search and retrieval, standard, MPEG, JPEG, MPQF, JPSearch, query format.

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

An optical biopsy (OB) is an optic diagnostic method capable to analyze the tissue in surface and in deepness without the need to extract it from the body. When it is obtained through confocal laser endomicroscopy (OB-CLE), the optical biopsies are taken by endoscopists, not trained in microscopic morphology which is the domain of the surgical pathology. In order to gain diagnostic confidence, the endoscopists could consult the images to a pathologist or could query an OB database. This paper presents a case-based computer-aided diagnosis system that assists medical personnel in the interpretation of OB-CLE images. The system design enables operation from a smartphone. Users are able to retrieve information about precedent diagnostics by providing an example OB image for content based image retrieval (CBIR), by using keywords, or by filtering different fields for structured retrieval. To effectively ensure interoperability with potential third-party applications the system provides a standard interface based on ISO/IEC 15938-12:2008 (MPEG Query Format) and ISO/IEC 24800 (JPEGSearch)....

1.7. Title: Quality Control in Telemedicine - “CE” Label.

Book edited by: Georgi Graschew, ISBN: 978-953-307-159-6, Publisher:

InTech, Publishing date: March 2011

<http://www.intechopen.com/articles/show/title/quality-control-in-telemedicine-ce-label>

Year: 2011

Number of pages: Chapter 12

Type of document/material:

- Book X

- Periodical

Teaching/learning material X

Language(s): English

Main keywords (4 or 5):

SHORT ABSTRACT

(*Brief description of the content in English, French or Spanish*)

As I explained previously [1], the European Directive for Medical Devices (MDs) and equipment, the DIR 2007/47/EC [2], aims to achieve the goal of quality of medical delivery at a distance, providing comparable demands in telemedicine or distance support as in face-to-face healthcare.

The transposition into Spanish law of the EU directive was the Royal Decree RD-1591/2009, dated 16 October 2009 [3], which regulates the use of medical devices called “PRODUCTOS SANITARIOS (PS)” (= health-care products) in Spanish, which came into force on the 21st of March 2010. As from that date, the CE-Label is always required in all “MDDs or Medical Device Data Systems” according to the FDA.

In this article, we will explain the philosophy behind the EU-Directive and the Spanish RD with respect to quality in medical assistance. We will also try to demonstrate that the same norms apply to Telemedicine, and finally we will underline the importance of training medical and health-care workers in those aspects linked to the Body of Knowledge of Telemedicine as well as in the essential safety aspects linked to medical assistance. These professionals may indeed be guilty of infringing the law and liable if the law is not applied. As it is well known, ignorance of the law is not an excuse. This has indirect consequences on the training and licensing of health-workers.

1.8. Title: Grid Technology in Telepathology and Personalised Treatment.

Publisher(s): Applications for Telemedicine Services & Delivery Editor: Dr. Ekaterina Kldiashvili. Georgian Telemedicine Union, Georgia IGI Global Publ. Philadelphia. USA.

[Grid Technologies for eHealth: Applications for Telemedicine Services & Delivery](#)

Year: 2011

Number of pages: 10

Type of document/material:

- Book X

- Periodical

- Others (*specify, please*)

Teaching/learning material X

Language(s): English

Main keywords (4 or 5): Patho-informatics, solo-pathology, quality control, automatic pathology, LBD techniques, MPEG, JPEG, ISO standards, GRID, PIMS

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

Histopathology requires automation, quality control and global collaborative tools. Usually, the PIMS (Pathology information management system) automates samples, images and reports and progressively incorporates the PI (Pathology informatics), the D-PATH (digital pathology), e-PATH (electronic pathology), the PPH (Patho-pharmacology), virtual autopsy (VA) and all type of translational researches in the PMIS (pathology management information system).

Not being subject to a specific standard, quality control follows ISO-13485:2003 on services and medical devices, ISO 17025:2005 on technical aspects; and ISO-15198:2003 for automate and quantifiable procedures that being medical software is affected by the new European Directive on medical devices. For non-standardized procedures, consumers' requirements for tests and calibrations are essential.

The paper analyses the non-standardized procedures: VS (Virtual Slides), GRID networking and Literature Based Discovery as tools for knowledge discovery of relevant relationships on image-diagnosis and personalized treatments. Standardized procedures available for search and annotation are the ISO/IEC 11179 Information Technology Metadata Registries specification, the ISO/IEC 13250:2003 for topics maps or MPEG-7 & 21 for images and the ISO/IEC 24800-3 for JPEG query search.

The forthcoming innovations are prepared to quality certify the so called "solo-pathology" robotic labs, supported by telepathology to reduce diagnostic errors and carrying out a relevant task on personalized treatment through GRID technology. In this environment the JPEG query searches to play a relevant role on images which metadata can be annotated on natural language.

1.9. Title: E-Health Systems Quality and Reliability: Models and Standards.

Publisher(s): <http://www.igi-global.com/requests/details.asp?ID=579>.

Year: 2011

Number of pages: 20

Type of document/material:

- Book X
- Periodical

Teaching/learning material X

Language(s): English

Main keywords (4 or 5):

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

A systematic gathering of glimpses related to future healthcare reveal at least two trends which might be interpreted as proposals of what the future of healthcare might look like. One trend embodies increased uses of nanotechnology, individualised drugs, cell-based computing and microchip-enhanced brains. The other one relates to emerging e-health care provision services, like telemedicine and e-health. Notwithstanding the previously mentioned prospects, both healthcare professionals and patients remain increasingly dissatisfied as a result of nebulous expectations and fundamentally different views with respect to the content of quality in healthcare as related to the reliability of systems and services.

Quality and reliability are thought to be measurable at least in specific domains. Thus, our knowledge on the subject could be compared with a fleeting glance. New ways of thinking should evolve based on what we actually know and that which we do not understand. The safest way to achieve this is to juxtapose the criticism with the existing body of knowledge. Unilateral approaches, for instance those dealing only with continuous quality improvement or

reliability assurance, do not work. Instead, a broad view of all ideas and tools used should be applied.

All the aspects for e-health systems design are discussed in this book to formulate epistemic criteria for evaluation purposes. The purpose of the book is to provide a comprehensive coverage of the ideas of quality assurance and continuous quality improvement in e-health. With respect to quality assurance, the objective will be achieved by including a review of the methods used for quality assurance, including both advantages and disadvantages. As far as continuous quality improvement is concerned, a critical presentation of great thinkers' ideas will be included. Finally, new topics like quality education in healthcare and patient safety will be explored. Furthermore, an overview of reliability modelling in e-health networks will be provided which includes various reliability evaluation aspects, such as network, system, software and diagnosis.

1.10. Title: Three-Dimensional Ultrasound in the Study of Chromosomopathy Markers.

Publisher(s): World Global Congress

Producer and/or distributor (with address):

Year: 2011

Number of pages: release process

Type of document/material:

- Book
 - Periodical

Teaching/learning material X

Language(s): English.

Main keywords (4 or 5):

SHORT ABSTRACT

SHORT HISTORY *(Brief description of the content in English, French or Spanish)*

Classically, first and second term ultrasound markers were based on multiple anthropometric data, both morphological and functional, but the most significant can be summarized as follows:
NUCHAL TRANSLUCENCY THICKNESS

The applications of three dimensional (3D) ultrasound in pregnancy, especially at an early stage, have increased.

Detection of chromosomalopathy between weeks 10th and 14th of pregnancy.

Detection of chromosomopathy between weaner pigs Analysis of possibilities to identify and validate

Analysis of possibilities to identify Detection of embryonic / fetal abno

Detection of embryonic / fetal abnormalities
Detection of adnexal abnormalities
Investigation on new markers (currently under investigation and at the validation stage).
Now, we have grounds to state that 3D ultrasound has clinical utility, established by consensus in the field of obstetrics

Current expert opinion is that 3D ultrasound has certain advantages over two-dimensional ultrasound, because:

It establishes diagnoses and classification of anomalies

It constitutes a tool to explain the significance of an anomaly

It provides objective information on the malformation under study.

Comparatively, diagnostic sensitivity before 23 weeks of gestation is 85% for 3D ultrasound versus 30% for two-dimensional ultrasound.

1.11. Title: The Anatomy of an Optical Biopsy Semantic Retrieval System.

Teaching/learning material X

Language(s): English.

Main keywords (4 or 5):

SHORT ABSTRACT

(*Brief description of the content in English, French or Spanish*)

This paper addresses the question of how to build a case-based computer-aided diagnosis system that assists physicians and other medical personnel in the interpretation of optical biopsies obtained through confocal laser endomicroscopy (CLE). An optical biopsy is an optic diagnostic method capable to analyze the tissue in surface and in deepness without the need to extract it from the body. The system allows users to navigate and search over an image database containing optical biopsies of the human colon recorded with CLE. Users are able to retrieve information about precedent diagnostics by providing an example CLE image for content based image retrieval (CBIR), by using keywords for structured retrieval. The system's CBIR approaches a novel algorithm for automatic feature extraction in CLE images, showing results on inferring semantic metadata from low-level features. In order to ensure the interoperability with potential third-party applications, the system provides an interface compliant with the recent standards ISO/IEC 15938-12:2008 (MPEG Query Format) and ISO/IEC 24800 (JPEG Search)..

1.12. Title: Solo-Medicine in Optical Biopsies

Publisher(s): Proceeding HEALTHINF 2011 Edited by: V Traver, A Fred, J Filipe, H Gamboa. ISTICC isbn: 978-989-8425-34-8

Producer and/or distributor (*with address*):

Year: 2010

Number of pages: 441-445

Type of document/material:

- Book X
- Periodical
- Others (*specify, please*)

Teaching/learning material

Language(s): English & Spanish.

Main keywords (4 or 5): Solo-medicine, Optical biopsy, Confocal laser endomicroscopy, CLE, CBIR, Medical image retrieval, Query by image, ISO-15938-12, MPEG query format, MPQF, ISO 24800-3, JPSearch, JPEG query format, JPQF, Artificial intelligence, Multimedia standard.

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

A way to practice Telemedicine is to access a data-base capable to assist you in medical procedures (diagnosis, treatment and prognosis), similarly to consult a book or to ask a college. In many countries the lack of specialists and training capabilities demand to practice solo-medicine, that in the case of surgery require robots capable to induce anesthesia or help in vision or handling instruments. A relevant case is the diagnostic self-training requirements for optical biopsies (OBs) obtained with confocal laser endomicroscopy (CLE) or the assistance in the diagnosis of pathology slides. In both cases it is required a training set of digital images against which to compare the question case by means of image-queryformat. The present paper present a content-based image retrieval system (CBIR) based on the MPEG Query Format Standard in order to provide a set of similar pictures and the corresponding diagnosis to help on diagnosis or just to train the doctor. The paper defined the Image Solo-Medicine Paradigm (ISMP) architecture merging medical image standards and MPEG and JPEG standards. It tested the solution with normal, and benign colon OBs with 90% congruency. The ISMP is of particular interest viewed the proliferation of iPhone medical applications aiming to train doctors and support medical decisions.

1.13 Title: The Anatomy of an Optical Biopsy Semantic Retrieval System, April-June 2012 (vol. 19 no. 2)

Book X

Periodical

Others (specify, please)

Teaching/learning material

Language(s): English & Spanish.

Main keywords (4 or 5):

multimedia, metadata, multimedia databases, standards, image retrieval, video retrieval, feature measurement, healthcare

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

A case-based computer-aided diagnosis system assists physicians and other medical personnel in the interpretation of optical biopsies obtained through confocal laser endomicroscopy. Extraction in CLE images, showing prominent results on inferring semantic metadata from low-level features. In order to effectively ensure the interoperability with potential third-party applications, the system provides an interface compliant with the recent standards ISO/IEC 15938-12:2008 (MPEG Query Format) and ISO/IEC 24800 (JPEG Search).

1.14 Title: Health 4.0 in the i2i era

Publisher(s): International Journal of Reliable and Quality E-Healthcare (2011)

Producer and/or distributor (with address):

Year: 2012

Number of pages: pp. 16-27

Type of document/material:

Book X

Periodical

Others (specify, please)

Teaching/learning material

Language(s): English & Spanish.

Main keywords (4 or 5):

Multimedia, metadata, multimedia databases, standards, image retrieval, video retrieval, feature measurement, healthcare

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

The acceptance of iPhones, iPads, and iPods in medical environments, as well as the FDA approval of several diagnostic-prognostic-distant care-management applications, demonstrates the modern medicine trend to introduce mobile applications initiating the i2i era. Furthermore, Cloud and Internet applications ranging from non-quality control up to intelligent-quality-control data base management anytime, anywhere, are the basis of what is called Health 4.0. The present editorial listed approved FDA applications and future deployments, including three personal projects in iHealth: blood-pressure monitoring, iAnapath and the i-EEG control in child Attention Deficit Disorder.

1.15 title: E-Health Technologies and Improving Patient Safety: Exploring Organizational Factors

Publisher(s): IGIC GLOBAL (2011)

Producer and/or distributor (with address):

Year: 2011

Number of pages: pp. 16-27

Type of document/material:

Book X

Periodical

Others (specify, please)

Teaching/learning material

Language(s): English & Spanish.

Main keywords (4 or 5):

Multimedia, metadata, multimedia databases, standards, image retrieval, video retrieval, feature measurement, healthcare

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

The book will provide an overview of information and communication technologies that might affect patient safety in healthcare. The proposed book intends to provide a compendium of terms, definitions and explanations of concepts, processes and acronyms. Additionally, it will present chapters (each chapter consisting of 7,000-10,000 words) authored by leading experts offering an in-depth description of key terms and concepts related to different areas, issues and trends in patient safety in e-health.

Main keywords (4 or 5): Telemedicine

SHORT ABSTRACT

According to one of the numerous definitions of Telemedicine “providing medicine at a distance”, any doctor being trained in the use of some telematic devices could effort what he practice. The reality is far from this because to assure a safe practice, people have to learn and bear a minimum understanding of a wide range of topics: from economics to telecommunications and from medicine to legal aspects. Technology learning is not limited to technology itself but linked to its social practical consequences in all their aspects. To guarantee that none of the aspects related with Telemedicine are missed, this minimum knowledge has to be fixed, organized and in some way standardized. The main purpose of this book is to structure the basic knowledge linked to teaching to provide or to practice telemedicine, as well as an overview of the technology developments linked to this new discipline. As expressed in the title (Handbook of Telemedicine), the book is precisely structured as a “handbook” whose main value is the joint opinion of all the participating authors of what are the learning requirements for anyone that would like to practice Telemedicine. It is neither a full treatise nor a complete collection of all telemedicine applications or telemedicine basics. It was built with the aim of creating awareness to the academic aspects (technology development, telecommunications approach, law and regulations, medical practice) as well as to the minimum knowledge requirements to guarantee safe and appropriate medical practice. Nowadays this fact is enhanced by the evidence that welfare expenses cannot be endlessly increased, whilst an efficient health provision system in the context of the information society, will mark a new trend to configure health care practice in the next century. If training and teaching schemes are to cope with the demands of society it seems obvious that those careers and professions should consider structured and sufficient training in Telemedicine.

SHORT ABSTRACT

(Brief description of the content in English, French or Spanish)

Volume 4 of the multimedia material produced for distant training containing text, presentation and videos. Topics covered in these editions include Global vision of standard in Telemedicine.Quality control in Teleophthalmology and OCT. Telemedicine cost in Primary Attention. New aspects in the

DICOM standard. Wavelet compression on medical imaging. Image quality assessment. Identity management Quality of services in 4G networks. Telecardiology quality and reliability assurance frameworks. IHE in Spain. Data Protection Laws. Advances in Sanitary Regulation. OneQL: Efficiently Querying the Health Domain in the Semantic Web. Telemetry. Calibration of monitors in Radiology. Wide Spain. Standards of virtual reality. Environmental intelligence in telemedicine. Decision support system and robotics. Stitching & transmission in JPEG2000. Telemedicine in the Sea. Teleophthalmology in the HUC. Distance learning in surgery. Quality control and quality assessment medical device standards. Medical image modalities. Cardiac frequency and detection of cardiac events. Image stitching in medicine. Telepsychiatry efficacy. Hand-held computer in medicine. Spanish law and Telemedicine. Ethics in Telemedicine.

SHORT ABSTRACT

(*Brief description of the content in English, French or Spanish*)

IoT. El Internet de los Dispositivos médicos. Salud 2.0 a Salud 3.0, trata de los aspectos tecnológicamente mas avanzados sobre la gestión de los dispositivos a distancia a través de Intra o

Internet, con identificación univocas y altas en la red, que permiten la ubicación, gestión y modificación a distancia de los dispositivos médicos o mecánicos asociados (ejem: camillas...) de forma que se facilite no solo un MRP (management resource planning) sino una telemetría en condiciones de permitir la monitorización de los pacientes. En el segundo apartado nos movemos desde la Salud electrónica 2.0 a través de Internet en la que la calidad y control es limitado a la Salud 3.0 en la que se priman los criterios de control de calidad en todos los ámbitos de automatización y robotización.

Para ello contamos con expertos internacionales, especialmente seleccionados por sus aspectos innovadores en su clínica diaria o en sus investigaciones y por su apuesta por la estandarización y calidad de la asistencia.

Language(s): English-Spanish

Main keywords (4 or 5): Telemedicine

SHORT ABSTRACT

(*Brief description of the content in English, French or Spanish*)

Móviles 4G en Telemedicina, trata de los aspectos tecnológicamente mas avanzados sobre la gestión de los dispositivos a distancia a través de Telefonía móvil. Particularmente:

1.- El uso de los móviles de ultima generación para la medicina y las aplicacionesH2H (health2health) y las Smart-GRID o el acceso universal en la Nube, además de los aspectos técnicos del Packet Backhaul Technology, o las estrategias packet-core.

2.- El control de calidad de las aplicaciones de Telemedicina

3.-El informe:"Telecommunications, IT and Healthcare: Wireless Networks, Digital Healthcare and the Transformation of US Healthcare, 2006-2011" en el que se especifica que en USA la industria de TIC relacionadas con la salud se incrementara en un 8.4% en 5 años cubriendo desde \$7.5 billones en 2008 a \$11.3 billones en 2013. El gasto sanitario pasara de ser un 6% del PIB a un 16% a un 18%. La industria sanitaria se ve forzada a operar de forma mas eficiente, y un elemento central será la creación de redes eficientes capaces de compartir no solo datos sino imágenes de calidad para el diagnostico remoto que se lleva a cabo con personal

Medico altamente cualificado. Un coste enorme se pierde en el sistema en la interfase medico-paciente – tiempo de desplazamientos, buscar plazas a los enfermos, buscar la atención que requieren, administrar la atención etc... - Por ello el control remoto es algo esencial.

Para ello contamos con expertos internacionales, especialmente seleccionados por sus aspectos innovadores en su clínica diaria o en sus investigaciones y por su apuesta por la estandarización y calidad de la asistencia.

SHORT ABSTRACT

(*Brief description of the content in English, French or Spanish*)

Sanidad en la nube, i-Cloud y Consulta masiva trata los aspectos relacionados con “ la nube sanitaria”, el papel que la telefonía móvil desempeña en este tipo de actividades, así como la repercusión que tiene el denominado “ Crowsourcing” en el contexto sanitario que permite a los médicos consultar con los mayores expertos en las distintas áreas sanitarias.

La tecnología debe asegurar un sistema de provisión de servicios en sanidad, viable económicamente, descentralizado y ubicuo todo ello a bajo coste por ello los teléfonos inteligentes y los servicios en la Nube van a ser determinantes en esta evolución. El almacenamiento masivo de datos y su accesibilidad y control remoto con virtualización disminuirán costes y personal. se tratan en el presente libro, que se basara principalmente en como pueden los profesionales médicos valerse de las nuevas tecnologías y la comunicación (TICS), para hacer mas eficiente las asistencia a distancia.

Para ello contamos con expertos internacionales, especialmente seleccionados por sus aspectos innovadores en su clínica diaria o en sus investigaciones y por su apuesta por la estandarización y calidad de la asistencia.

4. Title of activity: WEB OF THE TELEMEDICINE GROUP

4.1. Title: www.teide.net/catai

Main keywords (4 or 5): Telemedicine

SHORT ABSTRACT

The CATAI web has as a main objective the spread of the Telemedicine in Spain and in developing countries. The non-for profit association for the CATAI (Center of Advanced Technology in Image Analysis) supports Telemedicine activities and studies in the field of:

Image Analysis at distance

Data transmission

Videoconsultation and videoconferences

On Line training

Distant telequantitation.

The Winter Courses of the CATAI can also be followed on line in a video streaming during its production by means of the Helix Videoserver providing Real Media output that contains the Power Point presentation together with the video image of the speaker.

(Please specify): _____ Web page

Duration:

Format: Html

Language(s): English-Spanish

Main keywords (4 or 5): Telemedicine distance training

SHORT ABSTRACT

The present activity carries out the diffusion of the structured training skills in the field of TELEMEDICINE. It introduces an innovative professional training by assuming new Information Society skills not only in the Health Care provision but also in the teaching methodology. The co-operation inside of the present CTC consortium will provide and update the contents of those rapidly moving technologies, and will bring innovative approaches in the teaching done at distance with experience of the ODL of APOLLO project as well as the experience on surgical virtual reality simulators provided by the new partners. The training is directed towards trainers to update their knowledge and skills; therefore, it means health care professionals (including directors and responsible people) in the European Union. This requires the updating of the Information Society training applied to health care.

This activity is linked with the initiative of the UNESCO Chair of Telemedicine to apply the consortium experience towards the urgent demand of Telemedicine in developing countries to improve their limited health care system efficiency and accessibility. The International teaching activities are arranged in intensive winter and Summer Courses particularly to update trainer knowledge and teaching material. This activity also takes into consideration the fact that a complete training is not possible in each individual country due to the irregular Health Care technology developments throughout the European Union

6.2. Title: Distant coaching and training(BREEZE)

SHORT ABSTRACT

- La cátedra de Anatomía Patológica de la Universidad de La Laguna, ostentada por la doctora Olga Ferrer-Roca, ha organizado el XXIV Curso de Análisis de Imagen del CATAI (Curso Avanzado Tecnológico de Análisis de la Imagen), una iniciativa muy consolidada que pretende exponer a alumnos y profesionales del sector los últimos avances en telemedicina, motivo por el cual, además, este centro académico es acreedor de una cátedra UNESCO en la misma materia. El curso de este año comenzará el próximo lunes, 28 de marzo en la Facultad de Medicina, donde se impartirá hasta el 3 de abril, y estará dedicado a aplicaciones médicas para iPhone y móviles 4G.

SHORT ABSTRACT

La cátedra de Anatomía Patológica de la Universidad de La Laguna, ostentada por la doctora Olga Ferrer-Roca, ha organizado el XXV Curso de Análisis de Imagen del CATAI (Curso Avanzado Tecnológico de Análisis de la Imagen). Con este programa se pretende acercar a alumnos y profesionales del sector los avances en telemedicina, es decir, la prestación de servicios médicos a distancia utilizando las nuevas tecnologías. El curso se impartirá entre el lunes 12 y el domingo 18 de marzo y tiene una duración de 80 horas.

9. 2011-Title of activity: 4G Mobile Phones in TELEMEDICINE

XIX Winter Course of CATAI

XXIV Image Analysis Course of the ULL

28th March-3th April 2011

4G Mobile Phones in TELEMEDICINE

La Laguna. Tenerife. Canary Islands. Spain.

Course recognized by: ESCAP (European Society of Analytical Cellular Pathology),

ISDQP (International Society of Diagnostic Quantitative Pathology) and ISCO (International Society of Cellular Oncology). <http://www.qub.ac.uk/cm/pat/isdqp/>;

Course recognized by EFMI (European Federation of Medical Informatics)

<http://www.efmi.org/>; <http://www.gsf.de/imei/efmi/>

80 Teaching hours

Monday 28th March, 2011

16-20h. *Welcome to the Course.* **M. Mar Julios**, Chancellor of Industrial Development and Technological Innovation. **Prof. Dr. E. Domenech** Head of the University of La Laguna (ULL), Tenerife. **Prof. Dr. L. Moreno Ruiz**. Research Vice-Chancellor, Univ. of La Laguna, Tenerife. *Service Oriented architecture-SOA for National Cancer Center Registry*, **Prof. Dr. Ch. Meinel**, Hasso-Plattner Institute, Potsdam University, Germany, <http://www.hpi.uni-potsdam.de/>

Tuesday 29th March, 2011

16-20h. *iPhone system integration in home-care.* **Prof. Dr. J. Roca**. ICT. Hospital Clínic Barcelona. <http://www.idibaps.ub.edu/cat/home.php>. *Interpath a pathology application with iPhone.* **Prof. H. Danielsen**. Director Inst. Medical Informatics. Radiumhospitalet. Oslo University Hospital. <http://www.room4.eu/interpath.htm>

Wednesday 30th March, 2011

16-20h • *Telestroke services* **Prof. Dr. JV Sanchez Andres-** Prof. Physiology. ULL. *Ultrasounds in the Telestroke- iPhone services.* **Dr. J. Carneado Ruiz & JA Rojo Aladro.** Neurology section. Infanta Elena Hospital in Madrid & Clinic Hospital of Tenerife.

Thursday 31th March, 2011

16-20h • *Telemedicine with mobile phones,* **Prof. Dr. O. Ferrer Roca**, UNESCO Chair of Telemedicine. ULL. <http://www.teide.net/catai>. *Virtual sonography to detect and follow up risk pregnancies.* **Prof. Dr. JM Troyano Luque**. Prof. Gynecology, Sono-department University Hospital. Tenerife. Canary Islands.

Friday 1th April, 2011

16-20h •; *Diagnostic DICOM images in 4G mobile phones.* **Prof.Dr. A.Horsch.** Technical Univ. Munich. Germany. <http://www.efmi-wg-mip.net/>. *Certified MMS in healthcare.* **Dn. S. Sapena Soler.** Lleida. <http://www.lleida.net> ; <http://www.doctormms.com/>

Saturday 2th April, 2011

16-20h. *CBIR – Optical biopsy data base content retrieval in 4G mobile phones.* **Prof. Dr. R.Tous.** Univ. Politec. Catalunya UPC, Computer architecture depart. <http://people.ac.upc.edu/rtous/docencia.html>. *Quality control in the medical applications for 4G mobile phones.* **Prof. Dr. A. Kastania**, Found Biomedical Res. Academy of Athens. <http://www.bioacademy.gr/EN.htm>.

Sunday 3th April, 2011

16-20h. *Students presentation of the IT works.* Coordinator: **Dr. O.Ferrer-Roca.** Telemetry, **Mr. J. L. López.** COMITAS Communications. <http://www.comitas.es>. Telesurgery. **Prof. Dr. G. Graschew and V. Guerkan,** Clinical university of the Charité, Berlin, <http://www.rk-berlin.de/op2000>. ESA- European Space Agency, ESTEC- European Space Research and Technology Centre, Noordwijk, Holland, <http://www.esa.int/>

Workshops: Everyday from 8 to 15 h.

Neuroimaging (Prof. Dr. JL Gonzalez-Mora, Antonio, Lic. F. Rodríguez Hernández; Medicine, Dr. G. Navarrete García. Psychologies, Lic. C. Modroño Pascual, Mathematics y Psychologies); 2. Robotic surgery and intelligent operating room (Prof.Dr. A. Alarcó & Dr. A. Bravo). 3. Digital signature in 4G mobile phones; 4. Portable ultrasonography; 5. Web control of diabetes; 6. Wearable computers; 7. Stroke image control with 4G mobile phones.

VENUE: Main hall of the Faculty of Medicine. University of La Laguna

2012-Title of activity: HEALTH CLOUD, I-CLOUD AND CROWDSOURCING IN
TELEMEDICINE

XX WINTER COURSE OF CATAI

XXV IMAGE ANALYSIS COURSE OF THE ULL

12 al 18 de Marzo de 2012

SANIDAD EN LA NUBE, I-CLOUD Y CONSULTA MASIVA.

La Laguna. Tenerife. Islas Canarias. España

Curso reconocido por: ESCAP (European Society of Analytical Cellular Pathology),
ISDQP (International Society of Diagnostic Quantitative Pathology) and ISCO
(International Society of Cellular Oncology). <http://www.qub.ac.uk/cm/pat/isdqp/>;

Curso reconocido por: EFMI (European Federation of Medical Informatics)
<http://www.gsf.de/imei/efmi/>

LUNES 12 DE MARZO, 2012

16-20h • *Bienvenida al curso.* **Francisca Luengo Orol**, Vice Consejera de Industria y Energía
Prof. Dr. E. Domenech, Rector de la Universidad de La Laguna (ULL), Tenerife. **Catalina Ruiz Pérez**, Vicerrectora de Investigación, Univ. de La Laguna, Tenerife. *Seguridad y aceptación de la sanidad en la nube* **Prof. Dr. Ch. Meinel**, Instituto Hasso-Plattner, Universidad de Potsdam, Alemania. <http://www.hpi.uni-potsdam.de/>

MARTES 13 DE MARZO, 2012

16-20h • *Atención domiciliaria en la nube.* **Prof. Dr. J. Roca**, ICT. Hospital Clínico de Barcelona. <http://www.idibaps.ub.edu/cat/home.php>. *Empresas de consulta masiva.* **M. Hudecek**, Maintop Businesses, República Checa. <http://www.maintop.biz/> ; <http://www.ideaswatch.com/>

MIÉRCOLES 14 DE MARZO, 2012

16-20h *Tecnologías de la nube de aplicación sanitaria.* **J.Gonzalez-Tarrio**, Brocade S. Jose. California. USA. <http://www.brocade.com/index.page> ¿Qué es el HealthCloud la Nube en sanidad? **J. Bru Sanchis**, Oficina de Farmacoeconomía. Subdirección General de Farmacia y Productos Sanitarios. Agencia Valenciana de Salud. Generalitat Valenciana <http://www.san.gva.es/cas/prof/dgf/homedgf.html>

JUEVES 15 DE MARZO, 2012

16-20h • *Sanidad en la nube y consulta masiva en medicina,* **Prof. Dr. O. Ferrer Roca**, Responsable de la Cátedra UNESCO de Telemedicina. ULL. <http://www.teide.net/catai>. *Sanidad en la nube para atención de la mujer con ultrasonidos.* **Prof. Dr. JM Troyano Luque**, Prof. De Ginecología, departamento de Obstetricia y Ginecología Hospital Universitario. Tenerife, Islas Canarias. **Ingeniero de Telecomunicaciones. D. González Méndez**, Unesco Telemedicine. ULL Tenerife. Islas Canarias. <http://catai.net/blog/acerca-de-este-blog/>

VIERNES 16 DE MARZO, 2012

16-20h • *Sanidad en la nube y consulta masiva en Radiología.* **Prof. Dr. A. Horsch,** Universidad Técnica de Múnich, Alemania. <http://www.efmi-wg-mip.net/>. *Seguridad en la Sanidad en la nube* **Dn. E. Aced**, Agencia de Protección de Datos. Madrid. <https://www.madrid.org/apdcm>

SÁBADO 17 DE MARZO, 2012

16-20h • *CBIR – Obtención de imágenes de biopsia óptica en la nube.* **Prof. Dr. R. Tous**, Univ. Politécnica de Cataluña, departamento de Arquitectura de Computadores <http://people.ac.upc.edu/rtous/docencia.html>. *La nube para la externalización de la sanidad* **Prof. Dr. A. Kastania**, Universidad de Economía y Negocios de Atenas, Grecia. <http://www.aueb.gr/users/kastania/researchank.htm> *Código ético en la atención sanitaria en la nube.* **Prof. Dr. A. Moumtzoglou**, Presidente de la Sociedad Helénica para la Calidad y Seguridad en el Cuidado de la Salud, Universidad de Atenas. <http://www.bioacademy.gr/>

DOMINGO 18 DE MARZO, 2012

16-20h • *Presentación de los trabajos de los estudiantes.* Coordinador: **Dr. O. Ferrer-Roca**, Telemetría, Mr. J. L. López, COMITAS Comunicaciones. <http://www.comitas.es>. *Telecirugía.* **Prof. Dr. G. Graschew and V. Guerkan**, Universidad Clínica de la Caridad, Berlín, <http://www.rk-berlin.de/op2000/> . ESA- European Space Agency, ESTEC- European Space Research and Technology Centre, Noordwijk, Holanda, <http://www.esa.int>

PRÁCTICAS: Todos los días de 8 a 15 h.

1. *Neuroimagen* (Prof. Dr. **JL Gonzalez-Mora**, Lic. **F. Rodríguez Hernández**, Dr. **G. Navarrete García**, Lic. **C. Modroño Pascual**); 2. *Cirugía robótica y quirófano inteligente* (Prof. Dr. **A. Alarcó & Dr. A. Bravo**). 3. *COWs-computadoras con ruedas* (**Mr. Bob Pyke**, Ohio.USA) 4. *Ultrasonografía portátil*; 5. *VNC* (Virtual network computing). 6. *iPhone telepathology with SkyLight*. 7.- *Dropbox cloud* **LUGAR:** Sala de Grados de la Facultad de Medicina ULL. **MATRICULA:** 400 €. Estudiantes: 300 € Tel.+34-(9)22-319321; Fax: +34-(9)22-641855. www.teide.net/catai
